I build access control for cloud and AI systems.

Final-year Computer Engineering student at SIIT, Thammasat University (**GPA 3.67**, graduating **May 2027**). I lead the two-person team building **TU Alert** for Thammasat University (launching soon) and research security for cloud and AI: **9 projects**, including a **Best Paper Award** at IEEE JCSSE 2026 (U-HAP, second author) and **FEDAC** (first author, under review at IEEE TDSC). **1st in Thailand** at the 2022 Olympiad in Informatics.

- **Open to: security internships from January 2027, in Thailand or abroad full-time roles from May 2027**

#1 COMPETITIVE PROGRAMMING
in Thailand: **TOI18 national champion**, 2022, after 1,000+ hours of training

TU Alert CLIENT PROJECT
built for Thammasat University; **I lead a team of two**; security built in; launching soon

9 RESEARCH
research projects: **2 accepted** (one **Best Paper**), 3 submitted, 4 in preparation; first author on 8

2 INDUSTRY
internships: **Allianz Ayudhya** (security, mentored by the CISO), **Amity Solutions** (AI chatbots)

11 LEADERSHIP AND TEACHING
student events organised; **led SIIT First Meet 2024** (about 500 people); founded **two coaching platforms**

ISC2 CC CERTIFICATION
ISC2 Certified in Cybersecurity, 2025; Security+ planned Dec 2026

01 What I bring

Security engineering, end to end

I **design security mechanisms and build them**: a zero-trust framework with a zero-knowledge verifier (**first author**) and a Kubernetes authorization webhook (**Best Paper**, second author).

Identity, access and governance

Who may do what, checked on every request and **provable later**. Growing into **governance**: policy, third-party risk and audit.

Cloud-native by default

I test ideas on **real cloud deployments**: Kubernetes on **AWS EKS**, prototypes on **EC2**, containers with **Docker**.

AI agents, and how to limit them

I **build AI agents** that do useful work, and **research controls** that keep them inside what a human allowed, even under attack.

Leads, teaches and explains

I **start things and run teams**: TU Alert, 11 student events, two coaching platforms. I explain hard ideas simply.

02 Experience

Team Lead and Developer, TU Alert — Launching soon

Thammasat University (client project) / Rangsit campus, Pathum Thani — 2026

- Thammasat University hired a two-person student team to build **TU Alert**, a LINE-based campus incident-reporting system. **I lead the team**; we both write the code.
- **TypeScript** monorepo (Hono, Bun, Prisma, MariaDB, Redis, Next.js, LINE LIFF). **Security built in**: four roles, second-step staff sign-in, data retention and erasure, **Semgrep and gitleaks** in CI.

Information Security Intern — Allianz Ayudhya / Bangkok, Thailand — Jun to Jul 2026

- Mentored by the **CISO**, I built **two AI agents for third-party risk**: a **questionnaire agent** that answers due-diligence questionnaires with evidence, a reason and a **confidence score** per answer, and a **guidance agent** that walks business owners through each step.
- **Tested on real, anonymized cases** with the Information Security team; demonstrated the questionnaire agent (6 Jul) and **presented both** (31 Jul 2026).

Founder, Curriculum Author and Lead Instructor — TOI Tutor and ABIG Center (online) / toitutor.in.th — 2022 to present

- **Founded two online platforms** that coach students for Thailand's national programming olympiads; **coached hundreds of students** since 2022.
- Wrote and taught **COM300**, a full C++ and algorithms course: about 270 pages and **128 recorded lessons**.

R&D Intern, AI research team — Amity Solutions / Bangkok, Thailand — Jul to Aug 2023

- On the AI research team, I **built chatbots end to end** with **large language models (LLMs)** and a **knowledge base**, including the **AI pipeline** behind them; also data analysis and prompt engineering.

03 Research

Research supervisor: Prof. Somchart Fugkeaw, School of ICT, SIIT.

9 research projects: 2 accepted, 3 submitted, 4 in preparation. First author on 8. One question links most of them: can a security check be cheap enough to run on every request, and still be provable afterwards?

ZERO-TRUST ACCESS CONTROL

FEDAC

● Under review · IEEE TDSC | First author of 4

Verify the caller once, then check cheaply on every call. A hub picks the sign-in strength per service, up to a **zero-knowledge proof**, and issues a short-lived token; an **Envoy sidecar** checks it locally. Policies on **IPFS** are anchored on a **blockchain**, so every change can be audited.

My part: Research design and the full implementation, as first author of 4.

BUILT WITH Go | Rust | Groth16 zk-SNARK | Envoy + Istio | IPFS | Blockchain anchoring | AWS EKS

RESULT **1.4 ms** median authorization latency on AWS EKS, about 7,100 requests per second (paper under review)

ZERO-TRUST ACCESS CONTROL

U-HAP

● Presented · IEEE JCSSE 2026 · Best Paper Award

Second author of 4 · presented the paper

Authorization as a compiler problem. One graph model covers **RBAC, ABAC, ACL and deny rules**; policies are compiled ahead of time into per-resource indexes, so a request checks only the rules that can apply. **Deny always wins**, so every decision is deterministic.

My part: Co-developed the webhook and policy model, checked it against OPA, and presented the paper.

BUILT WITH Python | Kubernetes webhook | RBAC / ABAC / ACL | Graph policy model | OPA comparison

RESULT **~2.7× faster** policy updates reach a first decision vs OPA at 2,000 policies, with identical decisions

ZKAudit

● Accepted · KST 2027

ZERO-KNOWLEDGE AUDIT | First author

Prove you may audit, without revealing who you are. The auditor proves its right to read cloud logs in **zero knowledge**; proof checks are shared across verifiers, and the logs are checked against **Merkle commitments**, so tampering shows.

Post-quantum authorization across Kubernetes clusters

● Submitted

POST-QUANTUM SECURITY | First author

Every decision carries a post-quantum proof of its scope, signed with **ML-DSA**, keys agreed with **ML-KEM**. State is anchored on a **ledger** every epoch, so a failure or rollback cannot quietly widen permissions.

Self-healing fog computing for industrial IoT

● Submitted

RESILIENT CLOUD AND EDGE | First author

Edge servers that share work like a swarm, with no central controller. Nodes swap small hints, pull work when they have spare capacity and **recover after failures**; shared results are protected with **homomorphic encryption** and **Merkle proofs**.

MoCA: AI containment

● In preparation

AI-AGENT SECURITY | First author

Check an AI agent's authority when it acts, not when it plans. Permissions **only shrink** as agents delegate, revocation can be verified, and text from an untrusted page (a **prompt injection**) cannot push an action past its limit.

ZK-ALBA

● In preparation · journal paper

ZERO-KNOWLEDGE AUDIT | First author

Audit proofs bound to what each auditor may see. Each zero-knowledge proof is tied to the auditor's scope, and **load-aware verifier shards** reject reused proofs.

Threshold-gated encrypted SIEM

● In preparation

SECURITY OPERATIONS | First author

Catch an attack across companies without sharing readable logs. Companies correlate **encrypted** security logs, and tracing across them opens only when **several companies independently** report the same signal.

Fresh answers from elastic multi-cloud services

● In preparation

RESILIENT CLOUD AND EDGE | First author

Scale stateful services up and down without serving stale data. As replicas are added or removed across clouds, every answer carries a small **freshness proof**.

How I work on each project

1. Find the gap in published designs
2. Design the scheme
3. Build the prototype
4. Measure it on AWS or real data
5. Write the paper

04 Education and leadership

Education

B.Eng. in Computer Engineering — Aug 2023 to May 2027 (expected)
Minor in Cloud Computing and Cybersecurity. Sirindhorn International Institute of Technology (SIIT), Thammasat University GPA 3.67 / 4.00, first-class honours expected.

Leadership

President, Sub Student Committee 32, SIIT — 2024 to present
Leads a committee that represents the student body and organises academic and social events.

Lead organiser, SIIT First Meet 2024 — 2024
About 500 participants and 100 staff. Organiser of 10 more student events, 2023 to 2025.

Project manager and product owner, Novel Nest — Team project
Led a team of four to build a digital library and creative hub for readers and writers.

05 Awards and certifications

- 2022 — **National Champion: 1st place in Thailand and Gold Medal**, Thailand Olympiad in Informatics (TOI18)
- 2025 — **1st place overall**, Image Recognition Programming Challenge, Osaka Institute of Technology and SIIT
- 2022 — **Bronze Medal and Popular Vote**, SCIUS Forum 2022, Automated Cat Feeder
- 2026 — **Best Paper Award**, IEEE JCSSE 2026, Bangkok, for U-HAP (second author of 4)
- 2023 to 2027 — **Full scholarship**, 4-Year Continuing Academic Outstanding Student Program, SIIT

CERTIFICATIONS ✓ **ISC2 Certified in Cybersecurity (CC)** 2025 planned **CompTIA Security+** Exam planned Dec 2026

06 Hands-on security

NCSA CTF Thailand Tournament 2026 — Thailand Cyber Top Talent 2026, Aug 2026. Competed in a team on web, cryptography, digital forensics, OSINT and mobile challenges.

SOSECURE Road to Cybersecurity 2025 (GEN6) — Eight modules with labs: routing and firewalls, Linux hardening, Python security tools, Metasploit and web attacks, SOC log analysis in Splunk and Wazuh.

Ongoing practice — TryHackMe and Hack The Box. Nmap scanning in a Kali Linux home lab. DataCamp courses on Azure and AWS (2025).

07 Projects

TU Alert, Novel Nest, Arduino retro console, Automated Cat Feeder, Velour Mall.

08 Skills

Used in my research	Zero Trust · Kubernetes (RBAC, ABAC, webhooks) · AWS (EKS, EC2) · Docker · Envoy and Istio · OPA / Rego · IPFS · Hyperledger Fabric
AI agents and AI security	LLM agent pipelines · MCP gateway · Prompt-injection testing · Prompt engineering · NLP chatbots
Shipping and operations	GitHub Actions CI · Semgrep · gitleaks · Playwright · pm2 on Linux · Backups and restore
Cryptography	zk-SNARKs (Groth16) · Merkle commitments · ML-DSA · ML-KEM
Security tools (labs and CTFs)	Nmap · Wireshark · Burp Suite · Metasploit · OSINT · OWASP Top 10
Programming	Python · Go · Rust · C++ · C · Java · Bash · TypeScript · SQL
Also familiar with	Splunk and Wazuh (SOC labs) · Azure and AWS basics (DataCamp)
Languages	Thai (native) · English (fluent) · Chinese (basic)

09 References

People I have worked with, who agreed to be named. Contact details on request.

Apichai Wongchindakhun
Chief Information Security Officer (CISO)
Allianz Ayudhya
Internship mentor
Mentored me during my information security internship (Jun to Jul 2026), where I built and presented two AI-agent prototypes for third-party risk.

Prof. Somchart Fugkeaw
Professor, School of ICT
SIIT, Thammasat University
Research supervisor
Supervises my research and co-authors my papers, including FEDAC (under review, IEEE TDSC) and ZKAudit (accepted, KST 2027).

Pachara
Co-developer, TU Alert
SIIT, Thammasat University
Project partner
My partner on TU Alert: we are the two-person student team building it for Thammasat University.

Let's talk
Looking for an internship from January 2027 and full-time roles from May 2027: security engineering, cloud security or AI security.
